- Governance
- Framework

Contradictions?!

- You have responsibility for other people
- If you go too slow, the organization might not survive
- If you go too fast, you'll lose control

All rights Reserved 20th Century Fox

Governance Layers

- AI Governance is a combination of several types of governance that probably already exist in your organization.
- It needs to be led by corporate governance capabilities that provide oversight and guidelines.
- It should be operated by those that can take high level guidelines and make them usable.
- Lower the barrier to participate so people don't feel the need to skip it to "get the job done"

Governance

Governance Oversight

Policies, keeps up with new legislation and regulations, functions like corporate governance structures, hand-off guidelines to Governance Operations.

Governance Operations

Focuses on ensuring there are low barriers of entry to participate with governance activities.

Portfolio Management

Projects are brought forth through any means, from data governance or portfolio governance to individuals requests. Low barrier of entry means that any person can start a conversation, send an email to request support all the way to formal methods of requests.

Four Considerations

- Top-Down
- Policies
- K.I.S.S.
- Flexibility is strength

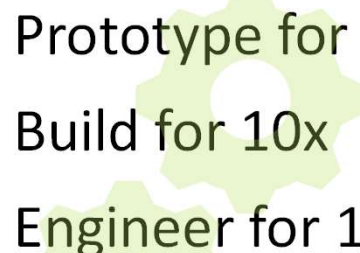

- Everyone approaches change differently.
- Yet, change is experienced together.
- Understanding the perspectives of others can be a powerful tool.

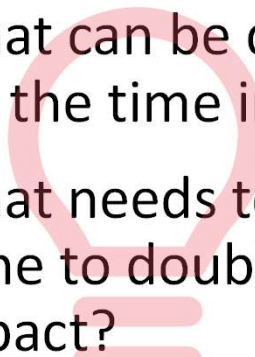

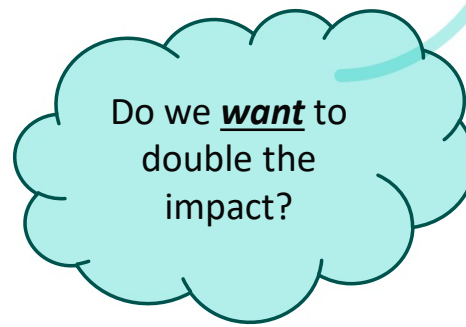

Planning & Process

Create Momentum

- 
- Dream in years
 - Plan in months
 - Evaluation in weeks
 - Ship Daily

- 
- Prototype for 1x
 - Build for 10x
 - Engineer for 100x

- 
- What can be done to cut the time in half?
 - What needs to be done to double the impact?

Do we *want* to double the impact?

- Governance happens in layers
- Changes happens with people
- Process drives momentum
- Don't hang on to stuff that can't serve your vision
